

The only platform that
certifies restaurant
data before AI sees it.

FohBoh's MGE is a deterministic
certification engine that sits
between raw restaurant data and
any AI system. It validates, scores,
and locks every data point before
intelligence is generated — so every
answer is grounded in certified fact,
not estimation.

Deterministic, not probabilistic

Same data always produces the
same certified output. No variability.
No surprises.

Trust Firewall — by architecture

AI is downstream of certification. It
reasons on locked, hashed outputs —
never raw data.

Court-admissible output

Evidence packages satisfy FRE
803(6), 902(11), and 1002
requirements by design.

Sector-agnostic engine

The MGE has no restaurant logic
inside it. Vertical knowledge lives in
the instance layer above.

Two products.
One engine.

Sentry delivers court-admissible fee recovery. Cortex delivers certified AI intelligence. Both run on the same deterministic MGE.

FEE RECOVERY

Sentry™

Deterministic fee recovery. Operator submits data, MGE certifies it, CAAR evidence package issued at Trust Score ≥ 85.
Zero AI — every output is rule-derived and fully reproducible.

Court-Admissible No AI CAAR + ExportPack Locked KPIs

\$199 / location / month • 10 location minimum

CERTIFIED INTELLIGENCE

Cortex™

AI intelligence layer on MGE-certified data. Every AI answer is grounded in a SHA-256 locked KPI definition. The AI never sees raw data — only certified, cryptographically locked outputs.

Certified AI Trust Firewall 163 Prompts Editable KPIs

\$249 / location / month • 25 location minimum

CALLS

CALLS

MGE — Metrics Governance Engine

DETERMINISTIC • SECTOR-AGNOSTIC • NO AI INSIDE • PATENT PENDING

Certification Pipeline

8-step deterministic process: entity
resolution → formula execution →
reconciliation → rule evaluation →
trust scoring → cryptographic lock.

KPI Vault

Operator KPI definitions SHA-256
hashed and locked. Immutable,
append-only, version-controlled.
Certified foundation for AI.

Trust Score • MQ6

6-component confidence score
(0-100). Deterministic — no overrides.
TS ≥ 85 enables full AI automation.
TS < 70 blocks AI entirely.

Evidence Engine

Merkle-hashed evidence bundles
with cryptographic proof at every
step. Outputs satisfy FRE 803(6),
902(11), and 1002 by design.

Trust
Score

Data certified before AI sees it

The MGE scores every dataset 0-100 across
six dimensions before a single AI token is
generated. The score controls exactly what
AI is permitted to do — and cannot be
overridden.

Zero
Hallucination

AI grounded in certified facts only

Every AI context injection comes from the
SHA-256 locked KPI Vault. Raw data never
reaches the AI layer — enforced by
architectural constraint, not policy or
prompt engineering.

Legally
Defensible

Evidence that holds up in dispute

Merkle evidence bundles, cryptographic
hash chains, and immutable audit trails
produce outputs designed to satisfy
federal evidentiary standards from the
ground up.

UNIT ECONOMICS

Why it pays
for itself

annual platform cost per location

ARCHITECTURE OVERVIEW

Two products. One engine. *Defensible by design.*

Sentry delivers court-admissible fee recovery. Cortex delivers certified AI intelligence. Both run on the same deterministic MGE.

SURFACES

Cortex™

AI INTELLIGENCE WORKSPACE

Claude reasoning — but only over certified data

163 curated prompts; refuses if uncertain

Trust Score on every answer (MQ6)

"Makes your data answerable."

Sentry™

REVENUE RECOVERY PLATFORM

Court-admissible recovery reports (CAARs)

DFR · MFR · Royalty Recovery (Q4)

~\$28K identified per location / year

"Makes your data collectible."

CERTIFICATION ENGINE

MGE™ — Metrics Governance Engine

PATENT-PENDING · 198 DETERMINISTIC RULES · ZERO AI INFERENCE

Same input → same output, every time. The CPA stamp on every number that leaves the platform.

Trust Firewall: AI is downstream of certification, never upstream.

YOUR DATA

POS · Bank statements · Card processors · DSPs · Vendor invoices · Franchise reports

Raw, messy, and never sufficient on their own.

Metrics Governance Engine

The deterministic truth layer beneath everything

FohBoh | MGE™

MGE — the Metrics Governance Engine is the foundation. It is a 12-stage deterministic certification pipeline powered by 198 proprietary governance rules, a six-dimensional Trust Score computed across 11 weighted gates, and an immutable KPI Vault that seals every certified value with SHA-256 hashing, RSA signing, and a full Merkel-tree evidence chain.

MGE never uses machine learning in the certification path. Given the same inputs, it always produces the same outputs — which is precisely what makes those outputs legally defensible under the Federal Rules of Evidence. MGE does not speak directly to operators. It controls what every downstream system is permitted to say and do.

UNTIL WE FIND MONEY

Every overcharge is **certified evidence** before it becomes a claim

FohBoh | Sentry™

Sentry is the commercial entry point — the product operators actually buy. It is a fee recovery engine with three modules: M01 audits delivery platform commissions (DoorDash, Uber Eats, Grubhub), M02 audits credit card processor fees, and M03 audits franchise royalty payments.

Every finding Sentry produces is not an estimate or a flag — it is a certified, hash-sealed, court-admissible evidence package called a CAAR. Operators pay nothing until Sentry finds real money. When it does, the recovery pays for the platform many times over. This is the wedge that gets MGE into the market.

Cortex

The AI intelligence layer — constrained by design

● MGE CERTIFIED INPUT

- Trust Score ≥ 85 required to unlock full capability
- KPI Vault — immutable, append-only, hash-verified
- 51 narrative triggers — certified context, not generated
- Chain of custody — every number traceable to a source
- Zero raw data — Cortex never touches uncertified records

● CORTEX INTELLIGENCE OUTPUT

CAUSAL REASONING

Pearl do-calculus on certified data

COUNTERFACTUAL

What-if against certified historical baseline

PATTERN DETECTION

Cross-location benchmarks from certified vault

PRESCRIPTIVE

Every recommendation traceable to a rule chain

● THE ARCHITECTURAL CONSTRAINT — WHAT MAKES CORTEX DIFFERENT

EVERY OTHER AI PLATFORM

LLM runs on raw, uncertified POS exports. Confident-sounding outputs with no auditability. Any hallucination or data error produces wrong financial guidance. A liability dressed as a product.

VS

FOHBOH CORTEX

Every answer is traceable to a deterministic rule chain and a locked KPI Vault record. Operators can stake money on the answers — because the answers are derived from certified truth.

FohBoh | Cortex™

Cortex is the AI intelligence layer - but with a constraint no other platform in the industry has: it cannot operate on uncertified data. Every answer Cortex generates is traceable to a specific locked vault record and a specific rule chain.

The comparison on the graphic is the investment thesis in one frame: every other restaurant AI platform runs a language model on raw POS exports and produces confident-sounding outputs with no auditability. Cortex runs on MGE-certified data and produces outputs operators can stake real money on. That constraint is not a limitation. It is the product.
